

Which email is right for you?

Want wireless email on-the-go? palmOne's mobile solutions are turning up everywhere, from boardrooms to courtrooms and from business trips to family road trips. Wireless email is available across much of the palmOne product family, including our Treo™ smartphones and our Zire™ and Tungsten™ handhelds.¹ This quick guide highlights the various types of email solutions and outlines easy ways to receive, read and send your email. More information on wireless email is on our web page at: www.palmOne.com/us/wireless/email/.

Mobile email for everyone – three typical scenarios for people looking to get email on-the-go.

Personal email

Business email for individuals

Business email for company-wide use

¹ Except for Treo products, wireless email requires connection via either Wi-Fi or compatible Bluetooth phone. Email account required, not included. Email requires data services from a mobile service provider at an additional cost.

Personal email

On the Treo 650 smartphone, the included VersaMail™ email client is flexible enough to connect to POP3, IMAP, and even Microsoft Exchange Server 2003, covering most scenarios an individual might encounter. With this connectivity, users of popular email service providers such as Yahoo!, AOL, SBC and most other major email providers can easily get their email on a Treo 650.²

POP3 and IMAP email solutions:

- VersaMail by palmOne (www.palmOne.com) - Comes on the Treo 650!

Business email for individuals

Business email resides behind a firewall, so when an individual wants to independently access corporate email wirelessly, software called a “redirector” is required. A “redirector” automatically pushes messages to the Treo 650. Secure, real-time access is available as long as the user’s desktop is logged on to the company’s network.³

Examples of email redirector solutions include:

- Sprint Business Connection - Personal Edition (www.sprint.com)
- Visto Mobile™ Personal Edition (www.visto.com)

Business email for company-wide use

When companies roll out a mobile email solution, IT specialists are generally involved, and most often this includes installing a server-based solution behind the company firewall. No additional software is required on the desktop, as the palmOne™ device talks directly to the company server. It is analogous to how a desktop client such as Outlook connects to the Exchange Server, except there are no wires involved!

Examples of company-wide email solutions include:

- Microsoft Exchange Server 2003: VersaMail by palmOne - Comes on the Treo 650!

Others:

- Lotus Domino/Notes: Intellisync Mobile Suite by Intellisync
- Microsoft Exchange/Outlook: GoodLink by Good Technology
- Novell GroupWise: NotifyLink Enterprise Mobility Solution for GroupWise by Notify Technology

² Email account required, not included. Email requires data services from a mobile service provider at an additional cost. Within wireless service coverage area only. ISP may also be required. Pricing varies by service provider.

³ Redirector must be enabled by IT administrator.
